

Exp

We found more than one version of [Functions in a Nutshell](#). You can view the alternate [here](#).

×

Mathematical expressions. That's it.

Operator precedence in python is exactly like pmdas or bodmas. Whatever it is that's used in Nigeria.

- 1.Parenthesis
- 2.Exponents
- 3.Multiplication/Division
- 4.Addition/subtraction

Addition

```
A = 5
B = 10
Z = A+B
print(Z)
>>>15
```

Subtraction, Parenthesis, Multiplication, Division

```
A = 5
B = 10
Z = (B-A) * 2/2
print(Z)
>>>5
```

Lol that's pretty much everything, in a nutshell at least. If you want more depth check the lecture notes.
